## WEATHER OUTLOOK: JUNE 2025

*Fig 1: Minimum temperature forecast for June*

As shown in Fig. 1 above, minimum temperatures for the month of June are expected to be very low, ranging from 0 to 5 degrees Celsius in areas along the Highveld.

Ground frost is probable in these regions. Most parts of the country are expected to have minimum temperatures below 15°C. Mild conditions are anticipated in areas along the Zambezi Valley and the extreme districts of Matabeleland South and Masvingo provinces.

**Table 2: Provincial Weather outlook valid from 03-06-2025 to 13-06-2025**

<b>Province</b>	<b>Agromet -Weather forecast</b>	<b>Wind Direction &amp; Wind Speed (knots)</b>	<b>Relative Humidity (%)</b>	<b>Min/Max (°C)</b>
Mashonaland Central	Mostly sunny and warm for much of the day. Cold both in the morning and evening.	NE'ly	50-100	17-29
Mashonaland East	Clear skies and warm in the afternoon. Cold both in the morning and evening with a chance of slight to moderate ground frost in places like Marondera	NE'ly	50-100	17-30
Mashonaland West	Mostly sunny and warm for much of the day. Cold both in the morning and evening.	VRB	50-100	15-28
Harare	Mostly sunny and warm for much of the day. Cold both in the morning and evening. Ground frost is probable in all frost prone areas	E'ly	50-100	17-29
Midlands	Mostly sunny and warm for much of the day. Cold both in the morning and evening. Ground frost is probable in all frost prone areas	NE'ly	50-100	07-24
Manicaland	Clear skies and warm in the afternoon. Cold both in the morning and evening with a chance of slight to moderate ground frost in places like Nyanga	NE'ly	50-100	08-25

## AGROMET ADVISORY

---

- Clear skies cause frost that harms winter wheat and vegetables—cover seedlings with mulch and irrigate fields at dawn to reduce damage.
- Freezing nights increase animal stress—provide windbreaks, extra feed, and warm drinking water for young livestock
- Frost-prone areas (Gweru/Matopos) will face more cold mornings—prioritize frost-resistant crop varieties and monitor temperatures at sunrise.
- Persistent dry, cold weather may delay spring planting—store seeds properly and prepare irrigation for early-season droughts
- Dry winds and cold days reduce soil moisture—retain crop residues and limit tillage to conserve water for winter crops
